LANDSCAPE IMPROVEMENTS NARRATIVE

We are seeking an alternative standard to allow for 100% decorative gravel coverage within the parking islands. This xeriscape design with the decorative gravels in place of landscape material will reduce water requirements and usage on site, and create a cleaner design and look to enhance the user experience. The design and use of decorative gravels will create a unique sense of place within the site from lots adjacent. This will also minimize the use of gas and other fuels needed for crews to drive out to the site and maintain grass or planted islands with additional maintenance equipment.

Images of this implemented in the recent Dallas locations are attached below:
